## Materials and Methods

### Validation of US Geological Survey publications and authors

Some US Geological Survey (i.e., USGS) scientists are based at universities under the auspices of the Cooperative Fish and Wildlife Research Units Program. When reviewing the records returned by SCOPUS we found that publications by these USGS researchers are returned in Scopus searches using the Scopus ID code for the USGS (60011347), but the primary affiliation provided by Scopus for the USGS authors was that of the host university (e.g., the affiliation for USGS Scientists at the Florida Cooperative Fish and Wildlife Research Unit was “University of Florida”). To correct the affiliations for publications by these USGS authors we downloaded the complete list of USGS publications from the USGS Publications Warehouse (1). The [.csv](#) file includes the comprehensive metadata for  $N = 17,445$  articles published from 2019-2025, including the article title, name of the journal or book in which it was published, the publication’s DOI, the names and ORCID IDs of authors and - in the case of USGS affiliates - their email addresses (e.g., [author@usgs.gov](#)). This information allowed us to identify each publication’s USGS authors and assign them the Scopus affiliation code for the USGS (60011347). We then cross-referenced each article’s metadata with the processed Scopus downloads to determine (1) if any publications in the USGS file were missing from our Scopus data set and (2) validate the federal affiliation of authors for articles that were found in both the USGS and Scopus data sets. After validating the federal affiliations for these articles, we used the Scopus Author ID and ORCID numbers of the USGS authors to search for and correct any name variants that might be present in the data set (e.g., Abby Powell, Abby N Powell, AN Powell).

### Validation of federal Scopus IDs

Authors whose affiliations indicated they were a consultant to a federal agency or program or were working under contract were excluded from the list of federal affiliations, as were non-profit foundations and other organizations created by congress to support the activities of or services provided by the federal government (e.g., National Park Foundation, Foundation for the National Institutes of Health). However, retired members of the armed forces or federal employees were included if the article included their agency affiliation as their primary address. A [.csv](#) file with each Scopus ID in table S2 with its respective affiliation and agency can be found at [https://github.com/BrunaLab/fed\\_pubs](https://github.com/BrunaLab/fed_pubs).

### Quantifying productivity of focal universities

To quantify the scale of changes in publication productivity by the US Federal Government we used Scopus to identify the most productive non-federal institutions based in the United States during our reference time period of 2019-2025. With the exception of Massachusetts General Hospital (i.e., MGH), these institutions were all “Mixed Undergraduate/Graduate-Doctorate Large” universities (*sensu* (2): Harvard University, University of Michigan, Ann Arbor, Stanford University, University of Pennsylvania, University of Washington, University of California, Los Angeles, University of Florida, University of California, San Diego, The Ohio State University, University of Minnesota, Twin Cities, University of California, San Francisco, University of North

Carolina, Chapel Hill.

Although MGH is the largest of the clinical education and research hospitals affiliated with the Harvard Medical School, it is not the only one. Moreover, many other universities are affiliated with hospitals for research purposes, but identifying these relationships and the extent to which research conducted there is directly supported by the the university and its infrastructure is challenging. We therefore excluded MGH from our analyses as a stand-alone institution and focused exclusively on publications whose authors had primary affiliations with a university or its medical school. For example, articles with at least one author with ‘Harvard University’ or ‘Harvard Medical School’ as a primary address were included. However, articles using ‘Massachusetts General Hospital’ as a primary address were not included, even if ‘Harvard Medical School’ was listed as an author’s secondary address.

The initial search of university productivity was conducted using  $N = 487$  Scopus affiliation IDs; following review of the results for additional affiliations the search was repeated using the  $N = 782$  Scopus Affiliation IDs found in table S3. This search resulted in  $N = 734,322$  publications, of which 81% were Articles, 10% were Reviews, 5.6% were book chapters, 3.2% were Notes, and 0.081% were Data Papers. These publications had  $N = 1,732,672$  unique authors;  $N = 404,806$  of which had one of the focal universities as their primary affiliation. Each article had an average of  $N = 8.9 \pm 12$  SD authors, of which  $2.7 \pm 3.2$  SD were affiliated with the focal universities. The number of articles published from January 2019 through July 2025 whose first-author was affiliated with each focal university can be found in table S3; the cumulative monthly productivity for each institution through July of 2019-2025 is in fig. S4.

A .csv file with the Scopus ID codes in table S3 and their respective affiliations can be downloaded from [https://github.com/BrunaLab/fed\\_pubs](https://github.com/BrunaLab/fed_pubs).

### Statistical analyses

We used bootstrapping (3) to determine if the number of articles published from January-July 2025 with a federal first author was significantly different from the number published during this time period in previous years. Because the bootstrap sampling should reflect as closely as possible the structure of the underlying data, and the number of published articles differs by month (fig. S1), we first used the 2019-2024 data to count the number of publications produced by each agency in each month of each year. We then simulated each agency’s January-July productivity by sampling at random with replacement from each month’s publication counts and then summing the January-July total across all agencies. This procedure was repeated  $N = 1000$  times, after which we counted the percentage of bootstrap runs where the simulated number of total January-July papers was lower than the actual number published in 2025. Finally, we conducted a less conservative bootstrap test in which an agency’s publication counts for each month of the simulation were selected without replacement from the pooled monthly counts.

The number of May-July publications in the ‘strict’ bootstrap ranged from 21,354-24,071 (median = 22,669). In the less conservative simulations, the number of publications

ranged from 17,992-29,594 (median = 22,480). For both the ‘strict’ and less-conservative tests, 100% of the bootstrap runs had simulated ‘strict’ and less-conservative bootstrap tests, the observed number of 2025 publications was less than (fig. S2). Finally, we used these bootstrapping procedures to compare the number of publications with focal university first authors from January-July 2025 with the number produced during the same time period in the years 2019-2005. The results for universities were similar to those for the federal first author publications (fig. S3).

## Supplementary Text

### Potential lags in Scopus uploads

It is important to note that our estimates of institutional productivity must account for the temporal lag when article’s are published and their indexing in Scopus; information on the magnitude of this delay helps ensure the window selected for analysis will minimize potential underestimates of productivity. Despite the widespread use of bibliographic databases such as Scopus and the Web of Science (4–6) to assess institutional productivity, to our knowledge only one study has quantified the lag between an article’s publication online and it being indexed in Scopus. (7) found that once articles had been published online, the median time-to-Scopus-indexing was only 36 days, and that 91% of articles were indexed within 10 weeks. As a result “Scopus indexing delays do not support the arbitrarily prolonged wait for bibliometric data” (7), and a 10-week window between the date of data collection and the close of the analysis window provides a “reasonable balance between the recency and completeness of published data”. We therefore chose July 31, 2025 as the end of analysis window. This cut-off appears to be conservative - when comparing results of searches conducted in July and September 2025, we found similar resultsab: (<1% difference) when using windows as short as 4 weeks.

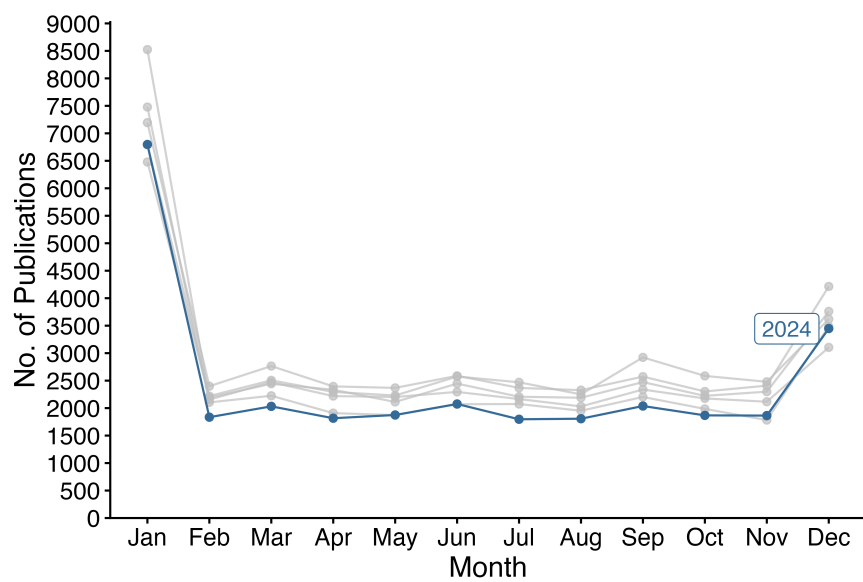

Figure S1: Articles by US federal government agency affiliates indexed monthly in Scopus (2019-2024).

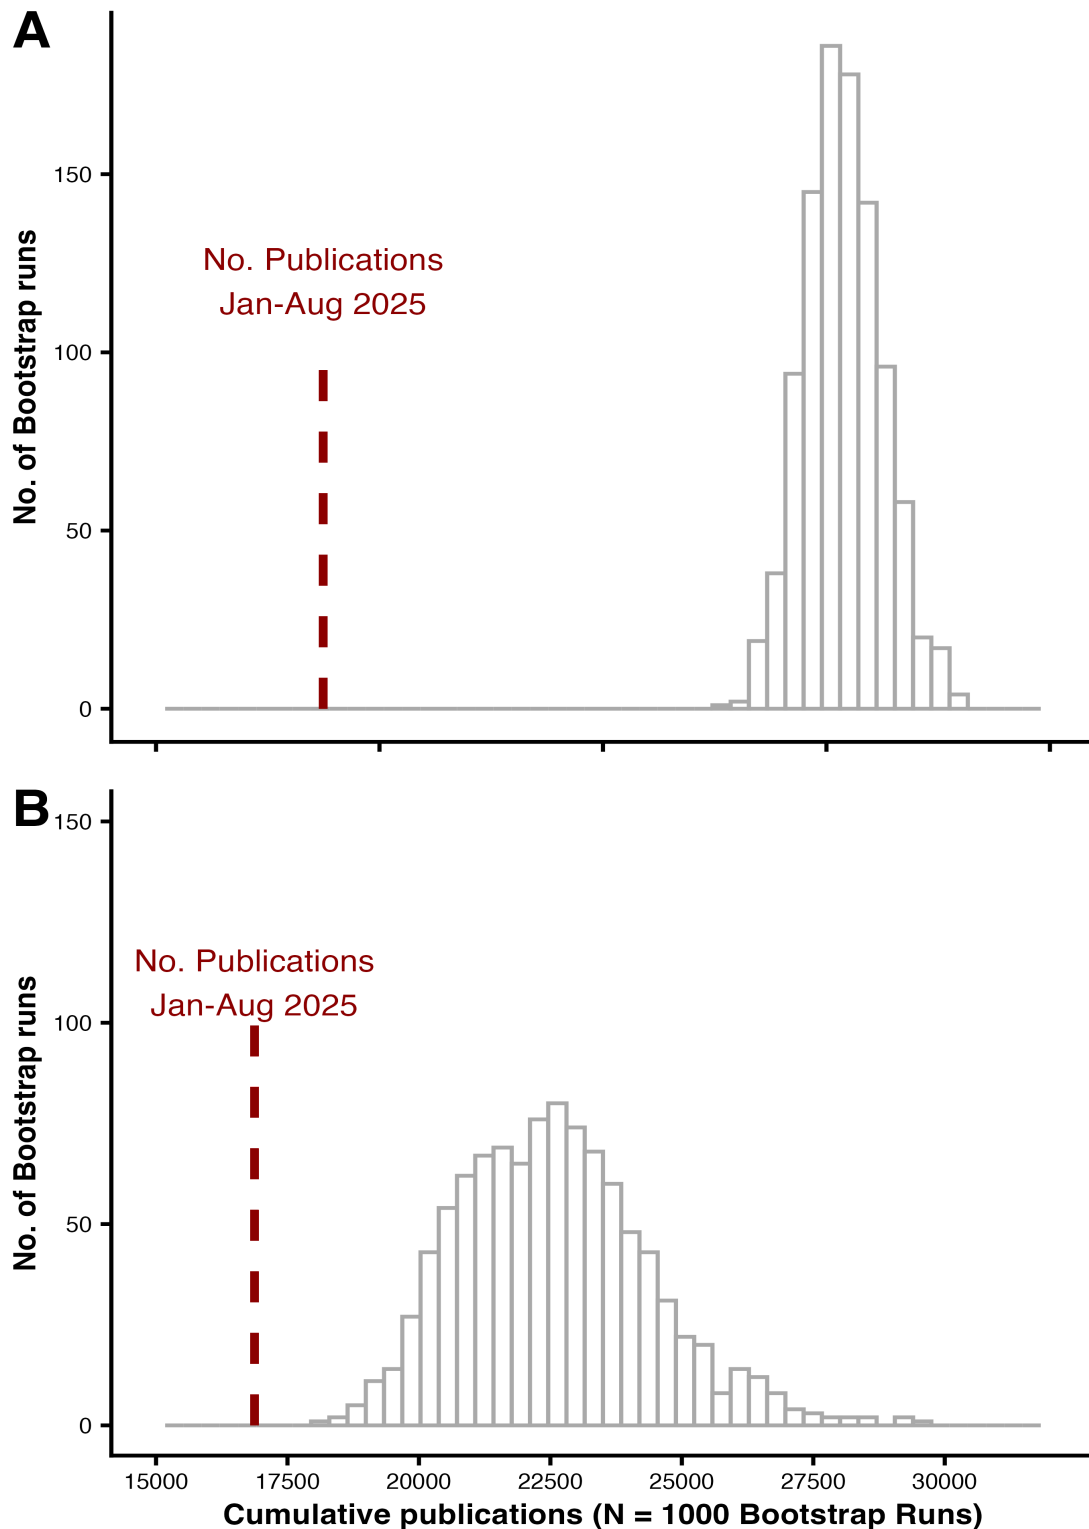

Figure S2: Total publications produced from June-July by federal agencies and departments of the US Federal government in  $N = 1000$  bootstrap simulations. The simulations are based on monthly productivity from January-July in the years 2019-2024. The number of January-July publications produced by these agencies and departments in 2025 is indicated by the dashed line. (A) Results from the conservative bootstrap procedure drawing samples for a given month from the 2019-2024 data for that month. (B) Results from the bootstrap relaxing the requirement that samples be drawn exclusively from the data for a corresponding month.

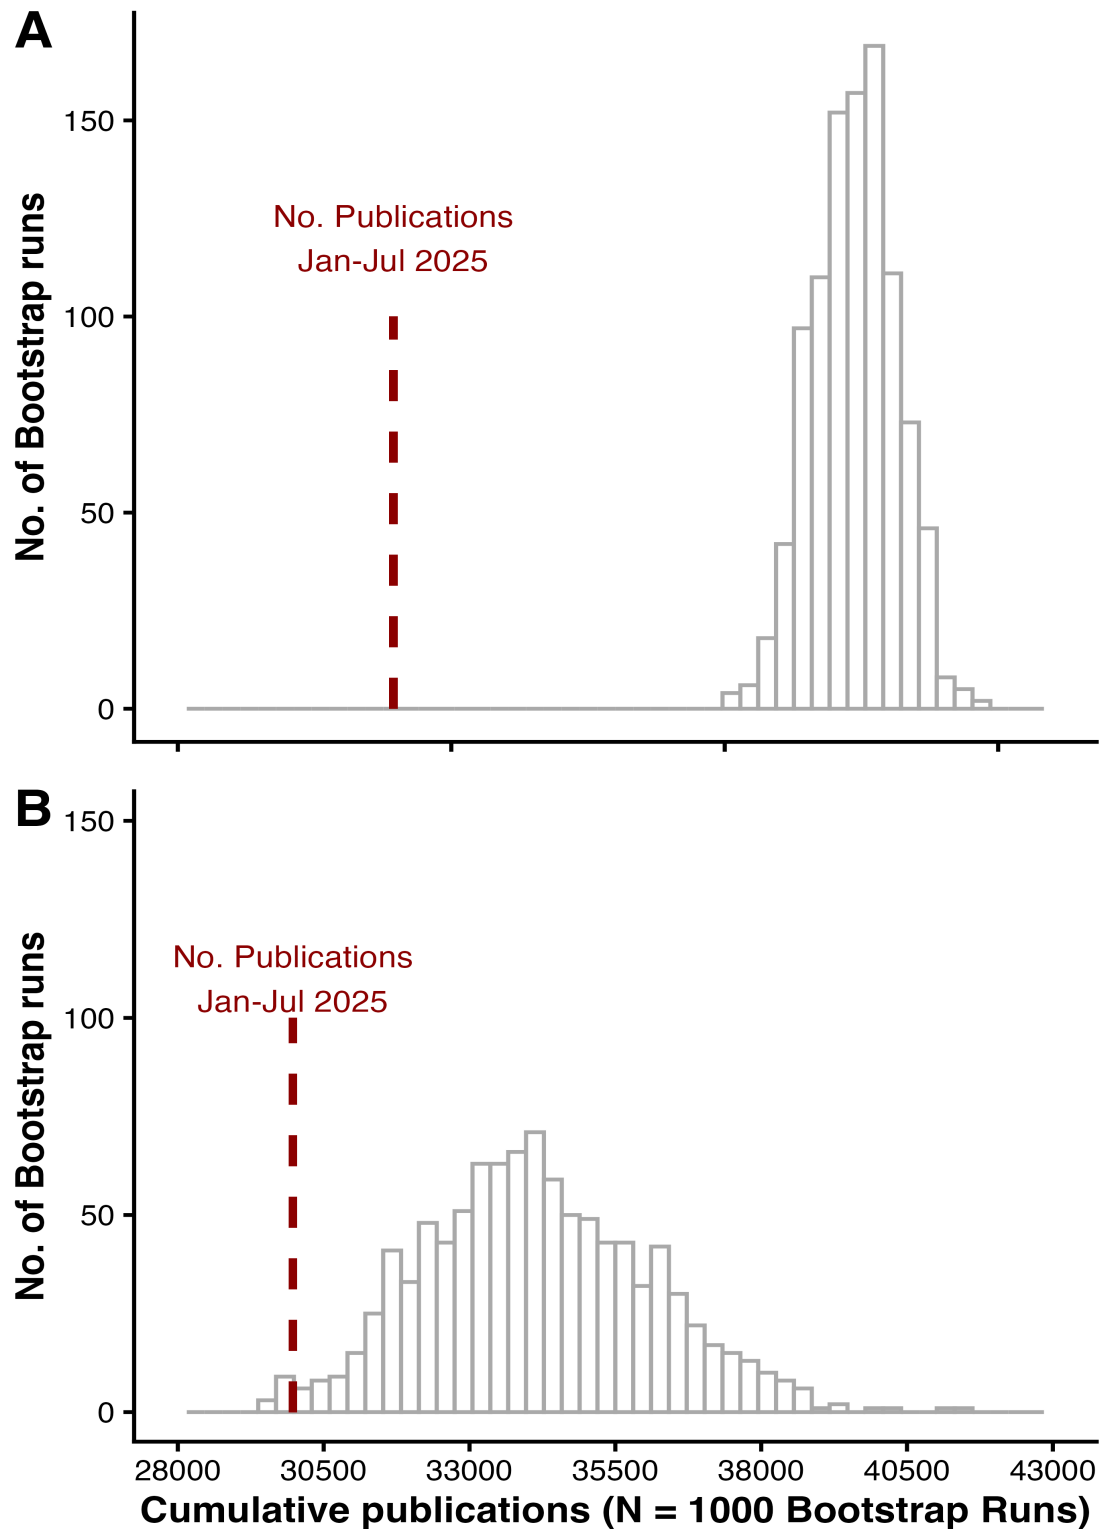

Figure S3: Total publications produced from June-July by focal universities in  $N = 1000$  bootstrap simulations. The simulations are based on monthly productivity from January-July in the years 2019-2024. The number of January-July publications produced by the focal universities in 2025 is indicated by the dashed line. (A) Results from the conservative bootstrap procedure drawing samples for a given month from the 2019-2024 data for that month. (B) Results from the bootstrap relaxing the requirement that samples be drawn exclusively from the data for a corresponding month.

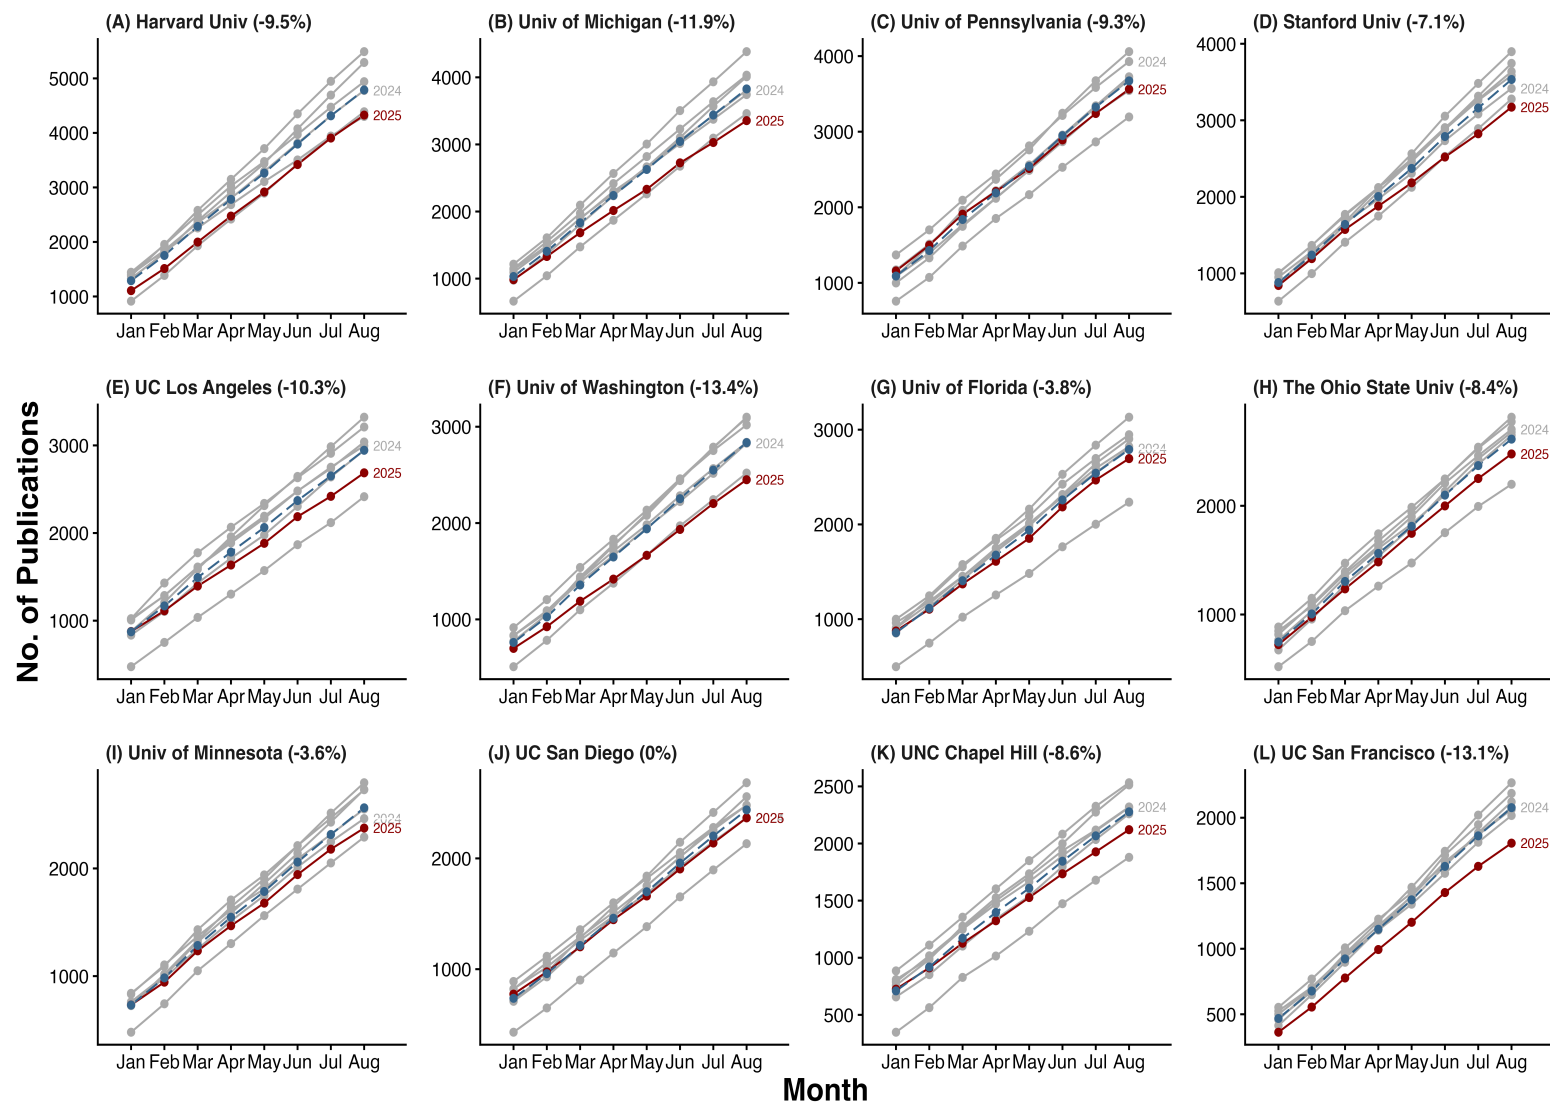

Figure S4: Cumulative number of publications through July of 2019-2025 whose 1st author was affiliated with one of 12 focal universities. The solid lines are the annual values for 2019-2025; the dashed line is the 2019-2024 average.

Table S1: The number of publications in our data set with at least one author from a focal university (any author position) and the number of publications in which the first author was affiliation with a focal university.

University	No. of Publications	
	Any author position*	1st Author (%)
Harvard University	121,907	49,047 (13.26%)
University of Michigan, Ann Arbor	81,326	38,840 (10.5%)
Stanford University	80,133	36,753 (9.94%)
University of Pennsylvania	78,573	36,862 (9.97%)
University of Washington	69,765	28,915 (7.82%)
University of California, Los Angeles	65,892	29,859 (8.07%)
University of Florida	58,755	28,070 (7.59%)
University of California, San Diego	55,763	24,842 (6.72%)
The Ohio State University	54,210	26,303 (7.11%)
University of Minnesota, Twin Cities	53,876	25,741 (6.96%)
University of California, San Francisco	53,819	21,775 (5.89%)
University of North Carolina, Chapel Hill	51,695	22,855 (6.18%)

\* The sum of publications in this column is greater than the total number of publications in our dataset because some publications include authors from multiple focal institutions (i.e., we did not attribute 'fractional authorship').

Table S2: Scopus Affiliation ID codes used to search for publications by authors affiliated with US federal government agencies and departments. Differences in how authors or journals abbreviate or structure affiliations can result in the same affiliation having multiple ID codes. A .csv file with each individual code and its respective affiliation and agency is available for download at the projects Github repository (see Materials and Methods).
